

EXERCISE: CREATE A BASIC WORKFLOW

Welcome to your first exercise in n8n! You'll practice building an automation that helps you process new client requests.

1. Trigger: Google Sheets

Set up the workflow to start automatically whenever a new row is added to your Google Sheet.

Your sheet should have: name, email, phone number, description. [Get the template here.](#)

2. Gmail: Thank You Email to Client

Add a Gmail node to send a thank-you email to the client's email address from the sheet.

Use the client's name in the message: "Hello {{Name}}, thank you for contacting us. We will send more details soon"

3. Google Contacts: Add Client

Add a Google Contacts node to create a new contact using the name and email from your Google Sheet.

4. Gmail: Send Notification to Yourself

Send yourself a quick notification email after the workflow runs.

Include the client's details: Name, Email, Description.
