

EXERCISE: AUDIO TRANSCRIPTION & SUMMARY

Step 1 (Trigger): Detect New Message with Audio in Telegram

Use the Telegram Trigger to capture new messages with audio. Enable the Download File option, so the audio is saved automatically.

Step 2: Transcribe Audio to Text

The downloaded file is sent to OpenAI (Transcribe Recording). This converts the audio into a text transcript.

Step 3: Summarize Using AI

The transcript is passed to Message a Model node, asking for a clear and concise summary.

Step 4: Save Summary and Metadata in Notion

Create a new page in Notion with the summarized transcript.
