

Quick heads-up before you jump into the next video.

The next lesson is **a little more advanced** than where we are right now. *It comes early* - before we build our first basic automations - because **a scraping tool will help you a lot later, once you start building real workflows**. So I wanted you to know about it from the very start.

For now, you can treat the next video as optional. You don't need to watch the whole thing today. The one thing I'd recommend doing right now is simple: **set up** the scraping tool ([Apify](#)), then come back and watch the full video later, when you're ready to use it.

Why set it up now? Because when you sign up, you get \$5 in free credits every month. It's not a one-time thing - it refreshes every month, so you can test and follow along without paying anything.

Here's all you need to do:

1. Click the [Apify sign-up link](#)
2. Create your free account.
3. That's it - your \$5 monthly credits are ready to use (every month \$5 credits refresh)

Then, whenever you want to pull real-world data into your automations, the tool is already set up and waiting for you.

One bonus: if you ever decide to upgrade to a paid plan, you can use code "**KRYSTIAN25**" at checkout **for 25% off any Apify plan for your first 2 months**.

See you in the next lesson.
