

Hello Dear Students,

Thank you for joining us in this course! By learning **AI Automations** and **AI Agents**, you're taking a big step toward growing your career, saving time, and becoming more productive.

In this chapter, we'll focus on building **basic solutions in n8n**. The goal is to help you get comfortable with the platform and start working on your own projects - before we move into theory and more advanced workflows.

Some exercises in this section require you to **connect n8n with other tools** (like OpenAI or Telegram). Don't worry - we explain how to set up all the needed credentials later in the course. But to make things easier, here's **quick access to those videos** in case you want to get started right away:

Credential Setup Tutorials:

1. [How to Connect OpenAI's LLMs to n8n](#)
2. [How to Connect Telegram to n8n](#)
3. [How to Connect Notion to n8n](#)
4. [How to Connect Google Gmail Drive Docs Sheets in n8n](#) - Only if you self host n8n!
5. **Looking for foundational theory?** If you'd like to start with the basics - such as what automations, APIs, webhooks, and LLMs are - check out the [\(Optional\) Beginner Theory and Foundations - Fundamental Concepts](#) section, which you'll find near the end of the course.

We hope you enjoy this journey and learn a lot along the way.

Wishing you all the best,
Krystian & Damian
