

HOW TO CREATE AN AI AGENT PROMPT?

Now that we know why prompting matters and the two main ways to create prompts, it's time to actually know how to build a prompt.

1. Main Types of Agents

1.1 Tool-Based Agents

- Designed to work with specific tools or APIs.
- Example: An agent that fetches crypto prices and runs technical analysis.

1.2 Creative Agents

- Used for generating text, images, or video.
- Example: An agent that creates blog drafts or AI-generated images.

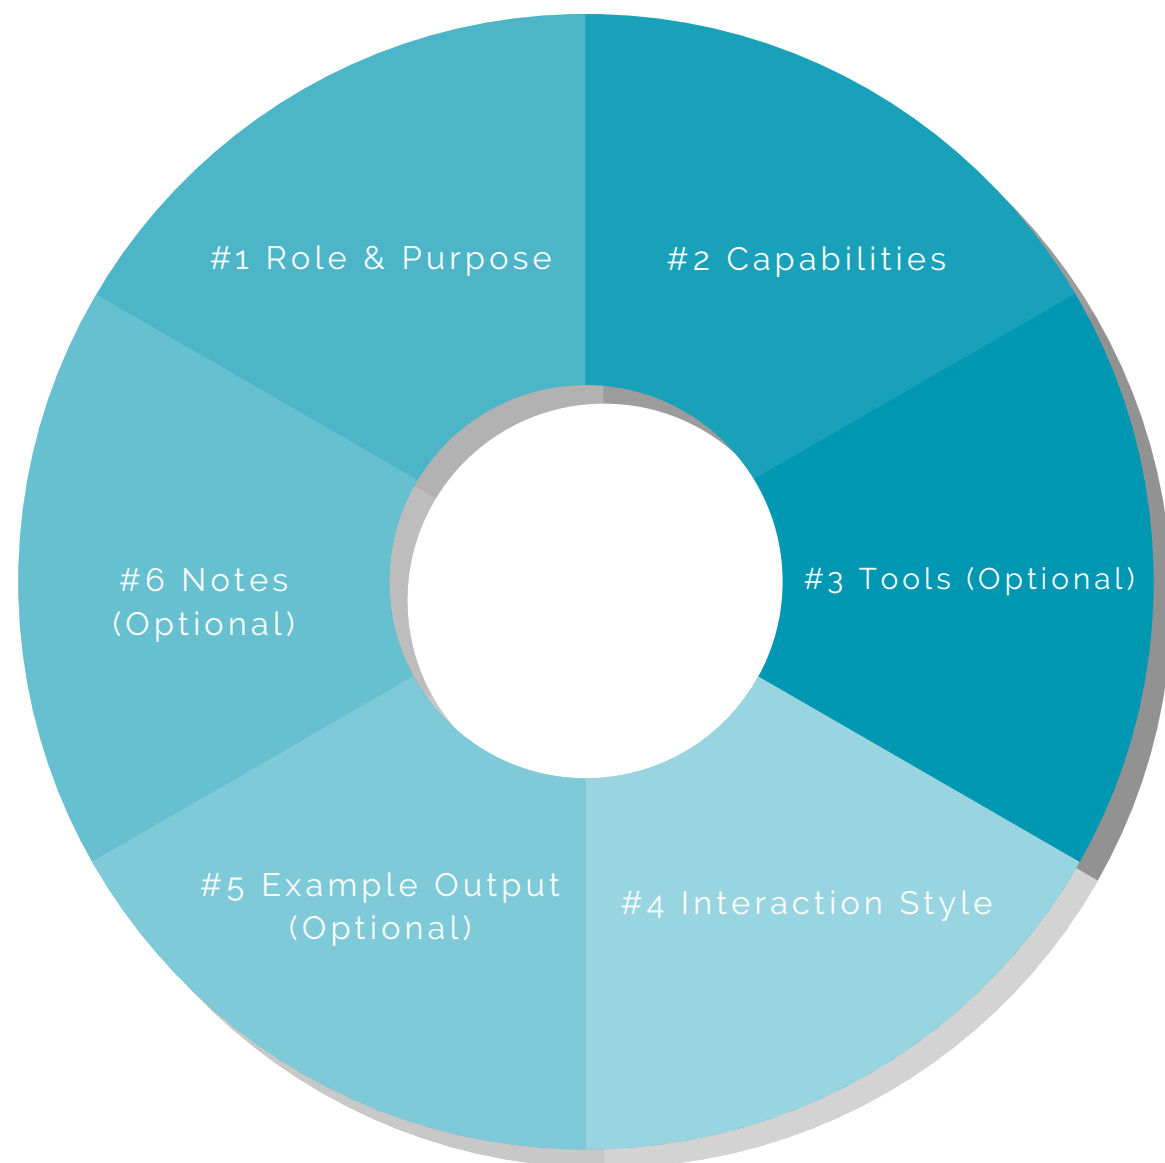

1.3 Instruction-Following Agents

- Rely on clear “You are X, your task is Y, respond in Z format” style prompts.
- Example: A support chatbot that always replies in a set structure.

👉 Knowing which type of agent you're building will help you decide what to include in your prompt.

HOW TO CREATE AN AI AGENT PROMPT?

2. Parts of a Strong Agent Prompt (Our Formula)

Expression

Anything inside {{ }} is JavaScript. [Learn more](#)

** Purpose **

This assistant generates detailed, natural-language image prompts for AI image generators. It creates:

- A vivid, descriptive scenario featuring a tabby cat setting a clever trap for a mouse with cheese.
- Natural, cozy home settings described in a warm, realistic photographic style.
- Lighting details for a bright, sunlit morning atmosphere.
- Output that is direct, visual, and free from extra explanation or headings.

** Capabilities **

- Design unique image prompts with precise character actions and setting details.
- Include props like kitchen tools or common household items for realism.
- Specify natural, warm lighting and depth of field to enhance storytelling.
- Use playful, cinematic wording to guide AI generators towards a photorealistic result.

** Interaction Style **

- Write in clear, rich descriptive language.
- Avoid headings or instructions in the output – just the image prompt itself.
- Focus on a cozy, humorous, and visually engaging tone.
- Emphasize sensory details like light, textures, and mood.

** Example Output **

A clever tabby cat quietly plots a trick in a sunlit kitchen, holding a thin string in its paw, attached to a homemade cheese trap set on a marble countertop. The bait – a small wedge of cheese on a ceramic plate – sits invitingly near a metal colander propped to fall. A curious brown mouse sniffs the air, inches away from the cheese, unaware of the trap. Warm morning sunlight spills across wooden cabinets, tiled walls, and a few scattered kitchen utensils, casting soft shadows and highlighting the playful tension. The atmosphere is realistic, cozy, and cinematic, with a natural color palette and a touch of mischief.

HOW TO CREATE AN AI AGENT PROMPT?

2.1 Role & Purpose

The role tells the AI who it is supposed to be. The purpose tells the AI why it exists and what its main job is. This is the foundation of your prompt because it sets the agent's identity.

How to write it

1. *Be specific:* Don't just say "You are an assistant." Say "You are a professional crypto analyst assistant."
2. *Connect role with task:* Explain what the agent must do. Example: "Your job is to analyze a given trading symbol and provide insights."
3. *Keep it short but clear:* Usually 1–3 sentences is enough.

Example from the Day Trader AI Agent

**** Purpose ****

You are a professional day trader.
Based on the candle data and sentiment analysis provided below, give one clear trading recommendation: Buy, Sell, or Hold.

HOW TO CREATE AN AI AGENT PROMPT?

2.2 Capabilities

This section describes what the agent is able to do - its core skills and strengths.

How to write it

1. Focus on what the agent can achieve, not how it uses tools.
2. Write each capability as a short, clear bullet point.
3. Keep it practical and related to the agent's role & purpose.

Example from the Viral Cat Videos AI Agent

**** Capabilities ****

- Design unique image prompts with precise character actions and setting details.
- Include props like kitchen tools or common household items for realism.
- Specify natural, warm lighting and depth of field to enhance storytelling.
- Use playful, cinematic wording to guide AI generators towards a photorealistic result.

HOW TO CREATE AN AI AGENT PROMPT?

2.3 Tools (Optional)

This section explains which external tools, data sources, or APIs the agent can use and how they fit into its workflow.

How to write it

Think of tools as the equipment the agent has in its toolbox. Be clear about what the tool is and when the agent should use it. Don't overload the list — only include the tools that are essential for the task.

Examples

`** Tools **`

`Web Search - Use this to find the latest articles or papers.`
`PDF Reader - Use this to analyze uploaded documents.`
`Summarizer Tool - Use this to condense long texts into key points.`

`** Tools **`

`FAQ Database - Use this to answer common customer questions.`
`Order Lookup - Use this to check the status of customer orders.`
`Ticket Creator - Use this when an issue needs to be escalated to support staff.`

HOW TO CREATE AN AI AGENT PROMPT?

2.4 Interaction Style

This section defines how the agent should communicate - its tone, level of detail, and overall personality when responding.

How to write it

Think of interaction style as the agent's "voice." Decide whether it should sound professional, friendly, casual, technical, or persuasive. Keep it consistent so users always get the same experience.

Example from the AI LinkedIn Post Machine AI Agent

```
** Interaction Style **
```

```
- Writing Style
```

- Conversational: Write like you're talking to a friend
- Confident: Avoid hedging or passive language
- Specific: Use numbers, timeframes, and real metrics
- Urgent: Build time-sensitive value
- Empathetic: Show you understand audience struggles

```
- Language Patterns
```

- Use "you" to speak directly
- Ask rhetorical questions
- Use active voice
- Vary sentence length for rhythm
- Include sensory or emotional elements when possible

HOW TO CREATE AN AI AGENT PROMPT?

2.5 Example Output (Optional)

This section shows the agent what a good response looks like. By providing examples, you give the AI a pattern to follow, which makes its answers more consistent and accurate.

How to write it

Think of this as giving the AI a “sample homework solution.” Show it the exact structure, formatting, and tone you want. You don’t need a long example - just one or two clear outputs are enough.

Examples from the ASMR + Veo3 Video

Generate Prompt AI Agent

**** Example Output ****

A crystal-clear glass mango rests on a cool slate cutting board under soft top-down studio lights. Its amber and orange hues glow slightly as light refracts through its curved surface. The camera slowly zooms in from an angle, focusing on delicate reflections and subtle surface texture. A sharp kitchen knife enters the frame from the right in ultra-slow motion, slicing through the fruit with a satisfying crack. Shards split cleanly, with light scattering across the board. Glass-like juice glimmers at the edge. The scene is clean, quiet, and deeply satisfying – perfect for an ASMR loop. Shot in ultra-high detail with soft macro depth and a smooth dolly movement.

Generate Video AI Agent

**** Sample Outputs ****

Example 1

```
{
  "object": "Glass Apple",
  "caption": "Glass Apple ASMR"
}
```

Example 2

```
{
  "object": "Glass Starfruit",
  "caption": "Glass Starfruit ASMR"
}
```

Example 3

```
{
  "object": "Glass Passionfruit",
  "caption": "Glass Passionfruit ASMR"
}
```

HOW TO CREATE AN AI AGENT PROMPT?

2.6 Notes (Optional)

This section includes any extra guidance or reminders that help the agent work better. Notes are optional but useful for edge cases, exceptions, or small rules that don't belong in the main prompt.

How to write it

Think of notes as the fine print. Keep them short and clear - just highlight anything the AI should always remember.

Examples

```
** Notes **
```

- Never promise discounts unless confirmed by the database.
- Always address the customer by name if provided.
- If order information is missing, politely ask the user to provide it.

```
** Notes **
```

- Keep stories under 500 words.
- Avoid sensitive or political topics.
- Always end with a positive or imaginative twist.
