

This section is designed to give beginners a strong foundation in the key concepts needed to build AI Agents and AI automations.

If you're already familiar with the following topics, **feel free to skip this section**.

- What **automation** is and how it works
- The difference between **nodes**, **triggers**, **workflows**, and how they interact
- How **APIs** and **webhooks** work, and how to integrate them into automations
- How n8n handles and manipulates **data** between steps
- What **LLMs (Large Language Models)** are and how they power AI agents and AI Automations
- ...and other basic topics, as the lecture titles in this section indicate.
